

The previous version of GHboost was already the leader in GH boosting products. The new GHboost version IV dramatically improves the anabolic and fat burning effects of GHboost and creates a new paradigm in boosting endogenous GH levels.

What can I expect from the use of GHboost?

GHboost will:

1. Increase GH
2. Increase IGF-I
3. Increase insulin function and sensitivity
4. Decrease cortisol
5. Optimize thyroid
6. Increase nutrient delivery to muscle

As a result you can expect:

1. Increased muscle mass
2. Decreased body fat
3. Increased energy
4. Increased exercise performance including power and endurance (yes even endurance benefits from increased levels of GH)
5. Increased recovery
6. Increased well-being
7. Anti-aging effects

While it's mostly known as a hormone that is involved in the growth of children growth hormone is vitally important in adults as well. That's because it plays a central role in body composition, metabolism, protein synthesis and exercise performance.

Growth hormone deficiency at any age, whatever its cause and whether its acute (as in certain instances of short or long-term overtraining) or chronic (due to aging, stress and other factors) can have significant adverse effects on body composition, performance, mood, cognition, cardiovascular function, bone mineral density, health, aging and quality of life.

GHboost stacks a number of different growth hormone releasing compounds that maximize natural GH secretion. Many of these compounds increase GH secretion by different methods (for example the mechanisms by which L-dopa and arginine stimulate GH secretion are different) and in some cases act synergistically (for example, arginine pyroglutamate and lysine have been shown to work synergistically to release growth hormone), resulting in an increased GH secretion. Stacking a number of these compounds also allows smaller doses to be used with a decrease in any potential side effects.

GHboost effectively suppresses somatostatin the hormone that inhibits GH secretion, while at the same time increasing GH secretion through various direct and indirect pathways including the stimulation of growth hormone releasing hormone (GHRH).

But that's not all as GHboost also increases the anabolic hormones IGF-I and insulin sensitivity, decreases the catabolic hormone cortisol, helps maintain thyroid function and increases nutrient delivery to muscle, all of which are necessary to maximize body composition and exercise performance, as well as maintaining energy levels, health and feelings of well being.

It's so good that GHboost is **used by hundreds of elite Olympic athletes and top bodybuilders** to optimize body composition and performance. With GHboost they're able to maximize muscle mass while taking body fat levels to the absolute minimum for their needs. They're finding that GHboost is the perfect supplement to complement their diet and training efforts. And with the emphasis on drug testing in many of these sports, GHboost offers the advantages of some of the more potent performance, anabolic and body composition drugs, without any of the side effects.

GHboost, a research driven nutritional supplement, is a unique growth hormone stimulating product that increases growth hormone (GH) secretion more effectively than any other GH boosting product on the market.

GHboost also increases serum and tissue levels of the potent anabolic growth factor, insulin-like growth factor I (IGF-I). Growth hormone and IGF-1 act together to increase protein synthesis, decrease muscle breakdown and increase body fat loss.

Nutrition Panel GHboost version IV

Supplement Facts: Serving Size: 5 Tablets Servings Per Container: 30					
	Amount Per Serving	% Daily Value		Amount Per Serving	% Daily Value
Vitamin C (as Ascorbic Acid)	500 mg	833%	Bovine Colostrum	1000 mg	*
Vitamin B6 (as Pyridoxine HCL and Pyridoxal-5 Phosphate)	10 mg	500%	Immunoglobulins	250 mg	*
Niacin	15 mg	75%	Velvet Bean Extract (Mucuna pruriens) (seed)	400 mg	*
Zinc (as Zinc Citrate)	10 mg	67%	L-Dopa	60 mg	*
Chromium (Amino Acid Chelate)	25 mcg	21%	Turmeric Extract (Curcuma Longa) (root)	200 mg	*
Copper (as Copper Gluconate)	200 mcg	10%	Polygonum Cuspidatum Extract (root) (Protylair®)	430 mcg	*
Acetyl-L-Carnitine	500 mg	*	Resveratrol	215 mcg	*
Acetyl-L-Tyrosine	200 mg	*	GHBoost Proprietary Complex	1700 mg	
GABA (Gamma-Amino-Butyric-Acid)	500 mg	*	Alpha-Glycerolphosphorylcholine (Alpha GPC), Alpha Lipoic Acid (ALA),		
L-Arginine Pyroglutamate	500 mg	*	Anterior Pituitary Peptides, Calcium Phosphate, CDP Choline, Glutathione (Reduced),		
L-Arginine Alpha Ketoglutarate	500 mg	*	L-Glutamine, L-Glycine, L-Tyrosine, Melatonin, Taurine,		
L-Ornithine HCL (hydrochloride)	300 mg	*			
L-Lysine	200 mg	*			
Other Ingredients: Cellulose, Stearic Acid, Modified Cellulose Gum, Hydroxypropylmethyl Cellulose, Magnesium Stearate, Silicon Dioxide.					
*Daily Value not established
