

LipoFlush Energy Expenditure Trial

We compared 24-hour periods where we obtained minute by minute energy expenditure values (kcal/min) without LipoFlush vs with LipoFlush.

The test subject burned 2041.78 kcals/d without LipoFlush and 2279.27 kcals/d with LipoFlush. The difference is 237.49 kcals/day or 11.6%.

The dose used was 2 tablets taken in the AM with morning coffee. It appears as if the increase in metabolism lasted for close to 10 hours. It also dramatically reduced appetite.
